### Notes:

Potency assays performed on the same harvest batch of fruits with varying states of age as present in batch to represent the potency.

\*For Research, Forensic, and Harm Reduction Purposes

\*Instrument Calibration performed using DEA exempt certified reference materials

\*Extracts are prepared in concentrations within DEA exemption limits

\*Samples are immediately rendered unusable upon completion of assay

\*Results are reported as percent by weight and milligram's of compound per grams of sample

\*ND means the analyte was not detected at or above the threshold of quantitation (LOQ).

\*Total Equivalent Psilocybin = Psilocin \* 1.391 + Psilocybin. This value represents the equivalent amount of psilocybin if none had been converted to psilocin
